

AVAILABLE NOW!

Mr. Gasket and ACCEL/DFI announce the immediate availability of our highly anticipated DFI Generation 7+ LS1/LS6 kit. We now have units in stock and ready for shipment. These kits will allow you to install a Generation 7+ kit on a GM LS1 or LS6 platform, taking advantage of the stock sensors and harness on the engine to eliminate the need to purchase additional adapters, sensors, coil packs or triggering devices.

Now, nothing is impossible! The programmable DFI Generation 7+ Engine Management System frees you from the constraints of factory PCM based modifications! You will have real-time, full sequential control of your LS-1 powerplant, including everyday functions such as fan, TCC, shift light, and MIL indicator. Additionally, the DFI system introduces a whole new world of control for ***Nitrous, Turbo & Supercharged*** engine applications.

We expect to see some big power numbers generated by the LS-1 crowd with the use of the DFI Gen 7+ system! Multiple beta test sites have shown an improvement of 3 to 4 tenths quicker ET with minimal tuning, just by replacing the stock PCM!
